

4 Sudoku

You know how Sudoku works. All you have to do is to place numbers one to nine in each vertical and horizontal line and then make sure that each number appears once in each of the nine 3x3 squares. The difference here is that this is Roman Sudoku!

You use the numbers as below:

1	2	3	4	5	6	7	8	9
I	II	III	IV	V	VI	VII	VIII	IX

	VI			III		IX		I
IX	III	VIII	I		VII	V		VI
							VIII	II
III			VI		I		V	
				VII		VIII		
	VIII		V		III			VII
VI	I			IV				
VIII		III	II		V	IV	I	IX
V		IV		I			III
